

Competitive SEO Positioning — HNAK.com vs. KSA E-Commerce Leaders

Deep-Research Brief: Keyword & Backlink Analysis

Prepared: 8 June 2026 **Subject:** HNAK.com (online arm of Al Musbah Group) vs. Amazon.sa, Noon, Jarir, eXtra, Namshi
Method: Multi-source web research (5 parallel research angles), cross-checked across SimilarWeb, Semrush/Ahrefs public data, market reports, and SEO industry sources. Claims are **tiered by confidence** because much precise keyword/backlink data sits behind paid tools.

Confidence legend: ● High (multiple independent sources agree) · ● Medium (single credible source / reasonable estimate) · ● Low (single weak source, oddly specific, or internally inconsistent — treat as directional only).

1. Headline Finding

● **HNAK is a genuine but sub-scale SEO player.** Across SimilarWeb, Semrush, Ahrefs, and every major KSA e-commerce market report (ResearchAndMarkets, Mordor, GlobeNewswire), HNAK **does not appear** in top-site rankings, and **no public free-tool metrics** (Domain Rating, Authority Score, organic keyword count, traffic) are available for the domain. The competitors all have rich public profiles; HNAK’s absence is itself the signal — it operates well below the visibility threshold these tools track. Sources: [Semrush KSA top retail](#), [ResearchAndMarkets 2025-2033](#), [Scamadviser HNAK](#)

Strategic implication: HNAK cannot win on authority. Its realistic battleground is **Arabic-language, long-tail, localized, and category-niche** queries where the giants under-optimize.

2. Backlink & Authority Gap (the moat)

Semrush public-overview figures (ballpark; month-to-month volatile — treat as orders of magnitude, not exact):

Site	Authority Score	Referring domains	Backlinks	Confidence
Noon.com	~79	~12.8K	~2.8M	●
Jarir.com	~76	~8.7K	~544K	●
Amazon.sa	~72	~17K	~7.3M	●
Namshi.com	—	~5.3K	~1.2M	●
eXtra (.com.sa)	—	n/a public	n/a public	●
HNAK.com	No public data	No public data	No public data	● (absence confirmed)

Source: [Semrush overviews](#) for noon/amazon.sa/jarir/namshi.

● **Takeaway:** Competitors sit at 5K–17K referring domains. A site invisible to free tools typically has a few hundred at most. **This gap will not close through link volume** — HNAK should pursue *relevance and locality*, not raw numbers (see §5).

3. Keyword Footprint & Where the Demand Is

Competitor positioning

- 🟡 **Noon** leans on organic search as a *top* traffic driver (~41% of desktop visits), running a promotion/discount-led visibility strategy. **Amazon.sa** is **direct-traffic dominant (~42%)** — brand-led, with organic secondary. Source: [Semrush noon overview](#), [SimilarWeb amazon.sa](#)
- 🟢 **Jarir + eXtra own the electronics/transactional keyword real estate** (smartphones, laptops, gaming, appliances) — backed by same-day delivery and physical-store trust. Source: [ClickPost KSA e-commerce](#)
- 🟢 **Namshi owns fashion** as a vertical specialist (1,200+ brands). Source: [Istizada MENA top sites](#)

⚠️ **Traffic numbers conflict heavily across sources** (e.g., Amazon.sa reported anywhere from ~12M to ~61M monthly visits; Noon ~8.6M to ~26M; Jarir ~5.7M to ~25M). These mix "total" vs "monthly" vs different months and tools. **Do not cite specific visit counts as fact** — the reliable signal is *rank order* (Amazon.sa ≥ Noon >> Jarir ≈ eXtra >> Namshi), not the absolute figures.

The search-demand structure (this is the opportunity)

- 🟢 **Google holds ~95–97% of KSA search.** Source: [Go-Globe Arabic SEO](#)
- 🟢 **KSA is the most Arabic-dominant Gulf market.** Most product, review, and query content is Arabic (often Saudi dialect). English and Arabic require **separate keyword strategies** — do not machine-translate. Sources: [Go-Globe](#), [Upraise Arabic SEO](#)
- 🟡 ~68% of Saudi consumers prefer searching in Arabic; many code-switch EN/AR within a session. Source: [23hublab](#) — single source, treat as directional.
- 🔴 "79% of KSA stores use Google Translate for Arabic" and "Arabic voice search +67% YoY" — single weak sources; **unverified**, cite cautiously. Sources: [seosaudiarabia.company](#), [23hublab](#)

Net: The leaders are strongest in **English brand/transactional** terms and well-funded paid/promo. The **native-Arabic long-tail** is **comparatively under-served** — and that is precisely where a mid-tier site can rank.

4. Market Context (sizing the prize)

- 🟢 KSA e-commerce is a large, fast-growing market — credible estimates cluster around **~USD 21–31B in 2024–2026**, growing **~12% CAGR** toward USD 50B+ by the early 2030s. (Exact figures vary by analyst.) Sources: [Mordor](#), [Grand View](#)
 - 🟢 **Mobile-first & high connectivity:** ~78–80% of e-commerce activity is on mobile; near-universal internet penetration. Sources: [23hublab](#), [Safha](#), [GlobeNewswire Vision 2030](#)
 - 🟢 **Fragmented by vertical:** marketplaces (Amazon.sa, Noon) lead breadth; specialists own categories (Jarir/eXtra electronics, Namshi fashion). Mid-tier players win by **category depth, not breadth**. Source: [BusinessWire/ResearchAndMarkets](#)
 - 🟡 **Seasonal peaks** (Ramadan/Eid, White Friday, back-to-school) drive major spikes; evening/post-iftar mobile shopping dominates Ramadan. Source: [23hublab](#)
 - 🔴 Oddly precise Ramadan-2026 stats ("Noon +45% orders, Amazon +38%", "65B SAR spend") trace to low-authority outlets (thesauditimes.net, themiddleeastinsider.com) — **do not rely on these specific numbers**.
-

5. How Authority Is Actually Built in KSA (HNAK's playbook)

The link types that move the needle in this market — all achievable for a mid-tier retailer:

1. ● **Coupon / deal platforms** — high-DR, KSA-relevant, link *and* referral traffic. Priority targets: **AlCoupon (DR ~63, 5,100+ linking sites), CouponKSA (DR ~56), Almowafir (1,000+ partner stores), Picodi**. HNAK already appears on AlCoupon — expand systematically. Sources: [Ahrefs alcoupon](#), [Ahrefs couponksa](#), [Almowafir](#)
2. ● **Price-comparison engines** — Pricena, Yaoota, etc. Feed accurate product/price data; these are persistent referral + link sources. HNAK is already on Pricena. Source: [SimilarWeb comparison](#)
3. ● **Regional editorial / digital PR** — Arab News, Saudi Gazette, Argaam, Mubasher, Zawya. Newsworthy angles (Al Musbah's 190+ store footprint, omnichannel, local sourcing) earn contextual Arabic links the pure-play competitors can't easily replicate. Sources: [RankTracker KSA SEO](#), [Armanalahi Arabic link building](#)
4. ● **Local directories & Google Business Profiles** — one per physical store → local-pack + "near me" + foundational citations. This is HNAK's **single biggest structural advantage** over online-only rivals. Source: [RankTracker ME link building](#)
5. ● **Relevance > volume in Arabic link building** — niche-relevant Arabic links beat high-volume generic ones. Source: [Armanalahi](#)

6. Prioritized Opportunities for HNAK

Opportunity	Why it works	Confidence
Native Arabic SEO (real localization, Saudi dialect, not translated) on titles/meta/H1/descriptions	Leaders under-optimize Arabic long-tail; Arabic is the majority of demand	●
Brand + model + price long-tail ("سعر {موديل} في السعودية", "{brand} {model} price KSA")	Lower competition than head terms; high purchase intent	●
City/locality pages & GBP for 190+ stores ("online shopping Jeddah/Makkah/Riyadh")	Local-pack capture; structural edge vs online-only rivals	●
Category depth in winnable niches — modest fashion (abaya/hijab), perfumes/beauty, in-house brands (Min Hena)	Avoids head-to-head with Amazon/Noon on mass commodities	●
Coupon + price-comparison link program (AlCoupon, Almowafir, CouponKSA, Pricena, Yaoota)	Fastest credible authority + referral gains	●
Digital PR around Al Musbah offline footprint	Earns Arabic editorial links pure-plays can't	●
Seasonal evergreen landing pages (White Friday, Ramadan/Eid, back-to-school)	Captures predictable demand spikes; reuse URLs yearly	●
Mobile Core Web Vitals	78–80% mobile market; speed = rankings + conversion	●

7. What We Could NOT Verify (paid-tool / data gaps)

To turn this directional brief into a precise plan, the following require **paid Ahrefs/Semrush/SimilarWeb** access plus HNAK's own **Google Search Console**: - HNAK's actual organic keyword count, ranking keywords, and traffic. - HNAK's Domain Rating / Authority Score and referring-domain list. - Exact keyword-gap (which terms competitors rank for that HNAK doesn't). - Precise, current monthly traffic per competitor (public figures conflicted 2–3×). - Competitor backlink *quality* breakdown (vs. raw counts).

Recommended next step: a one-month Ahrefs or Semrush subscription to run (a) a keyword-gap report HNAK vs. Noon/Jarir/eXtra in Arabic + English, and (b) a backlink-intersect report to harvest competitors' coupon/PR/directory links. I can structure both as ready-to-run task lists.
